

Professional Experience

TrueCoach by Xplor

Aug 2022 - Present

JavaScript Engineer

- Updated and maintained an Ember.js web app designed for personal trainers to automate their planning, scheduling, and payments
- Collaborated with the backend team to design and build parts of the Ruby API
- Implemented multiple new features such as Group Messaging, International Payments through Stripe, and many other improvements to the User Experience
- Worked closely with the Product team to determine not only what was feasible, but what delivered the most value to our customers
- Collaborated with a global team of fully remote coworkers

RFD & Associates, Inc.

Sep 2019 - Aug 2022

Software Developer

- Created and maintained complex government information systems handling sensitive information such as Campaign Finance and Child Support. Worked with Postgres, Java, Angular 11, and AWS cloud infrastructure
- Used Java to improve and maintain legacy backend code for multiple government applications
- Improved and maintained JSF frontend code for an electoral ethics application
- Gained experience and technical proficiency with AWS services including Lambda, API Gateway, S3, EC2, and more
- Quickly became an essential part of the dev team by consistently and effectively communicating concerns, ideas, and solutions

Objective

To obtain a Software Engineer position where I can be an integral part of a team with goals and interests that match my own

Education

Operation Spark, 2019

Advanced Software
Engineering Immersive
Program

IBC Fundamentals of
Javascript, Functional
Programming, and Web
Development Level 3

Louisiana State
University, B.A. in 2015
Music Performance

Additional Projects

Manifest

Automate your savings growth by quitting your vices

- Connected the Node.js backend to Plaid API to access user's bank accounts and make requests on their behalf
- Used React Native with Expo to create a cross platform, diverse mobile app that provides a unique user experience
- Directed the implementation of a geolocation feature that cross references the user's location with their banking transactions
